

kaloidon

Kaloidon is an advanced gel formulation that, thanks to its components, helps improve the appearance of the scars (hypertrophic scars, skin thickenings and/or keloids) secondary to surgery or lesions of various nature.

The extract* of **Allium cepa** (onion), with high contents of **Quercetin** and of its glucosides (in a granted quantity higher than 10%), favours the correct healing process, besides reducing redness and hitching on the forming tissue. **Allantoin** has a lenitive action, while **Hyaluronic Acid** with low molecular weight and **chondroitin sulphate** support skin hydration and elasticity.

Film-effect is granted by **Pullulan** gel, a complex sugar of vegetable origin, that, besides maintaining the physiological hydration of the healing tissue, stimulates skin renewal.

Kaloidon, thanks to the characteristics of its formulation, facilitates an optimal massage of the scar. Starting from the stich removal it is important to massage the scar daily in order to keep the tissues elastic, stimulate the blood circulation and avoid the creation of adherences with the underlying tissues that can negatively influence the functionality of the area concerned. It is recommended to massage the skin with movements as per pictures below:

In case of particularly hardened tissues, prolong the massage by about 15 minutes and repeat the above mentioned steps 4-5 times. On very thickened scars, **Kaloidon** can also be used under dressing.

How to use

Kaloidon should be used after stich removal and on intact skin. Apply a proper quantity of product on clean and dry skin, two or more times a day, massaging until complete absorption.

On new scars, it is recommended the ongoing use of **Kaloidon** for at least two months, while on already developed scars and keloids, the application can be prolonged for 3-6 months.

Precautions for use

The product is contraindicated in case of ascertained hypersensitivity to its components. External use. Do not ingest. Keep out of the reach of children. Store in a cool and dry

place, far from heat sources. Do not use if the pack is damaged (if the aluminium seal on top of the tube opening is missing). **Kaloidon** is a transparent dark amber gel, possible shades of colour may be present, due to the natural origin of the onion extract.

FRAGRANCE FREE

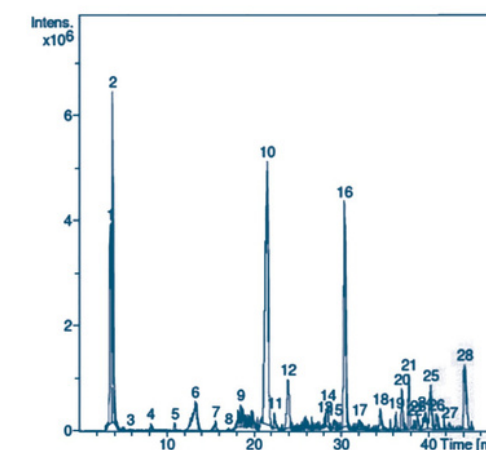

Nichel > 0.0001%

For an optimal cleansing of the area, before the application of **Kaloidon**, it is recommended the use of **Base Lavante 273**, hyposensitizing detergent with low delipidizing power. **Kaloidon** is perfume-, colorant- and preservative-free.

*The extract that makes the difference

The extract of **Allium cepa** (onion), with high contents of **Quercetin** and of its main glucosides, represents one of top quality components of Kaloidon line. For this reason, we decided to use a carefully selected raw material with the purpose that every batch contained a **minimum granted quantity of Quercetin** and of its main glucosides **higher than 10%**. This high concentration of active ingredients makes the action of onion more efficient, helping the correct healing process and reducing both hitching and redness on the forming tissue.

The picture reports the HPLC* test result carried out on Kaloidon, where three peaks (2-10-16) corresponding to Quercetin and to its main glucosides (quercetin diglucoside and quercetin glucoside) are visible.

*HPLC: High Performance Liquid Chromatography

For the ingredients, see the list on the outer packaging.
